

Reconstruction process (conceptual)

Success path

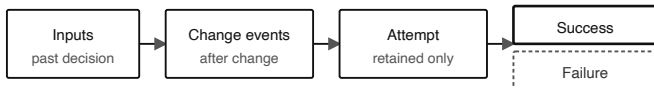

Failure modes

- missing / unbound component
- only live state
- staff memory
- t1 XAI demo (not success)

Current system state do not use

Reconstruction probe (method only - no results)

Success: mandatory components and bindings recoverable; not replaced by post-change state.

Failure: missing/unbound component; only current configuration; re-run of today's pipeline; or undocumented personal memory.

Example class: eligibility screening at t0, probed after change at t1.

Double border = Decision Knowledge artifact. Dashed = live state or failure path.
